AMENDMENTS TO THE CLAIMS

1-37 (Cancelled)

38. (Currently Amended) A supported, treated catalyst system produced by a process comprising the steps of:

(a) forming a supported bimetallic catalyst system comprising a first catalyst compound and a second catalyst compound, wherein the first and second catalyst compounds are supported on a common support and comprise Group 4 or 5 metals; wherein the common support is an inorganic oxide; and

(b) contacting the supported bimetallic catalyst system of (a) with at least one additional catalyst compound that can be activated by methylalumoxane.

39. (Previously Presented) The supported, treated catalyst system of claim 38 wherein the supported bimetallic catalyst system further comprises an activator.

40. (Previously Presented) The supported, treated catalyst system of claim 39 wherein the support is selected from the group consisting of silica, alumina, silica-alumina, and mixtures thereof.

41. (Original) The supported, treated catalyst system of claim 39 wherein the activator is selected from the group consisting of: a Lewis acid, an alkylaluminum compound, and an ionic activator.

42. (Original) The supported, treated catalyst system of claim 41 wherein the Lewis acid is methylalumoxane.

43. (Original) The supported, treated catalyst system of claim 41 wherein the alkylaluminum compound is trimethylaluminum.

44. (Original) The supported, treated catalyst system of claim 38 wherein the supported bimetallic catalyst system comprises a first and a second transition metal.

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

45. (Currently Amended) The supported, treated catalyst system of claim 44 wherein the at least one ~~additional catalyst~~ compound that can be activated by methylalumoxane comprises a transition metal that is the same as the first transition metal.
46. (Currently Amended) The supported, treated catalyst system of claim 44 wherein the at least one ~~additional catalyst~~ compound that can be activated by methylalumoxane comprises a transition metal that is the same as the second transition metal.
47. (Currently Amended) The supported, treated catalyst system of claim 44 wherein the at least one ~~additional catalyst~~ compound that can be activated by methylalumoxane comprises a transition metal that is different from both the first and second transition metals.
48. (Previously Presented) The supported, treated catalyst system of claim 38 wherein the second catalyst compound comprises a metallocene catalyst compound.
49. (Currently Amended) The supported, treated catalyst system of claim 48 wherein the metallocene catalyst compound is represented by a formula selected from the group consisting of:

$Cp^A Cp^B MX_n;$

$Cp^A (A) Cp^B MX_n;$

$Cp^A (A) QMX_r;$

$Cp^A MQ_q X_w;$

$Cp^A M(W_2GZ)X_y;$ and

$T(Cp_\Delta M(W_2GZ)X_y)_m$

wherein: M is a metal atom selected from the group consisting of: Group 4 or 5 Group 3 to Group 12 metal atoms;

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

C_p is a ligand selected from the group consisting of: substituted or unsubstituted cyclopentadienyl ligands and ligands isolobal to cyclopentadienyl;

X is selected from the group consisting of: halogen ions, hydrides, C₁ to C₁₂ alkyls, C₂ to C₁₂ alkenyls, C₆ to C₁₂ aryls, C₇ to C₂₀ alkylaryls, C₁ to C₁₂ alkoxy, C₆ to C₁₆ aryloxy, C₇ to C₁₈ alkylaryloxy, C₁ to C₁₂ fluoroalkyls, C₆ to C₁₂ fluoroaryl, C₁ to C₁₂ heteroatom-containing hydrocarbons and substituted derivatives thereof; amines, phosphines, ethers, carboxylates, dienes, and hydrocarbon radicals having from 1 to 20 carbon atoms;

(A) is a bridging group;

Q is a heteroatom-containing ligand;

T is a bridging group selected from the group consisting of C₁ to C₁₀ alkynes, C₆ to C₁₂ aryles and C₁ to C₁₀ heteroatom containing groups, and C₆ to C₁₂ heterocyclic groups;

G is selected from the group consisting of carbon and silicon;

W is selected from the group consisting of -O--; --NR--; --CR₂-- and --S--;

R is selected from the group consisting of C₁ to C₁₀ heteroatom containing groups, C₁ to C₁₀ alkyls, C₆ to C₁₂ aryls, C₆ to C₁₂ alkylaryls, C₁ to C₁₀ alkoxy, and C₆ to C₁₂ aryloxy;

Z is selected from the group consisting of R, --OR, --NR₂, --CR₃, --SR, --SiR₃, --PR₂, and hydride;

each X is chemically bonded to M;

each C_p group is chemically bonded to M;

m is an integer in the range of from 1 to 7;

n is 0 or an integer from 1 to 4;

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

q is in the range of from 0 to 3;

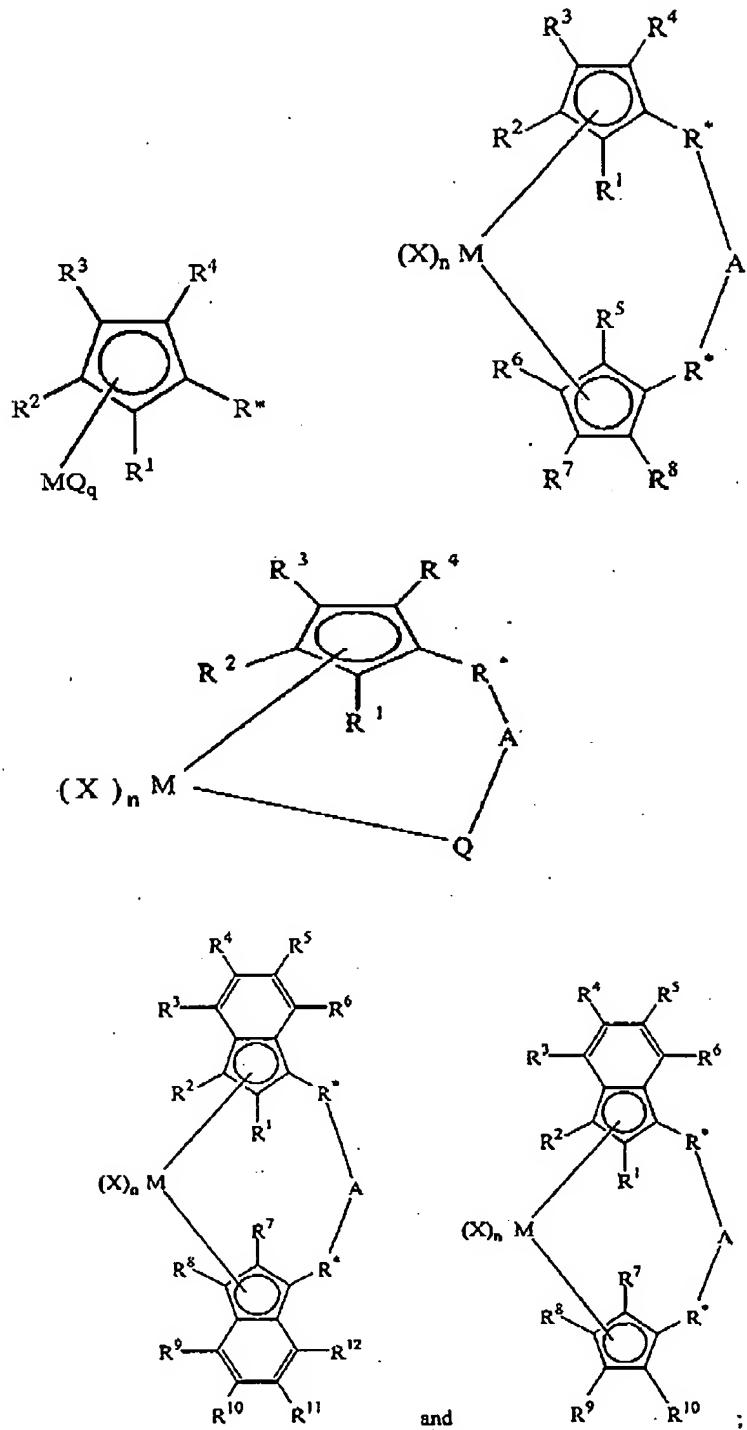

r is 0, 1 or 2;

w is in the range of from 0 to 3; and

y is 1 or 2.

50. (Currently Amended) The supported, treated catalyst system of claim 48 wherein the metallocene catalyst compound is represented by a formula selected from the group consisting of:

Application No. 10/748,014
 Amendment dated February 27, 2008
 Reply to Office Action of January 11, 2008

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

whercin M is a metal atom selected from the group consisting of: Group 4 or 5 Group-3 to Group-12 metal atoms;

Q is selected from the group consisting of halogen ions, alkyls, alkynes, aryls, arylene, alkoxy, aryloxy, amines, alkylamines, phosphines, alkylphosphines, substituted alkyls, substituted aryls, substituted alkoxy, substituted aryloxy, substituted amines, substituted alkylamines, substituted phosphines, substituted alkylphosphines, carbamates, heteroallyls, carboxylates, fluorinated alkyls, fluorinated aryls, and fluorinated alkylcarboxylates;

q is an integer ranging from 1 to 3; each R* is independently selected from the group consisting of hydrocarbyls and heteroatom-containing hydrocarbyls;

A is a bridging group;

X is selected from the group consisting of: halogen ions, hydrides, C₁ to C₁₂ alkyls, C₂ to C₁₂ alkenyls, C₆ to C₁₂ aryls, C₇ to C₂₀ alkylaryls, C₁ to C₁₂ alkoxy, C₆ to C₁₆ aryloxy, C₇ to C₁₈ alkylaryloxy, C₁ to C₁₂ fluoroalkyls, C₆ to C₁₂ fluoroaryl, C₁ to C₁₂ heteroatom-containing hydrocarbons and substituted derivatives thereof; amines, phosphines, ethers, carboxylates, dices, and hydrocarbon radicals having from 1 to 20 carbon atoms;

n is 0 or an integer from 1 to 4; and

R¹ through R¹² are independently selected from the group consisting of hydrogen radical, halogen radicals, C₁ to C₁₂ alkyls, C₂ to C₁₂ alkenyls, C₆ to C₁₂ aryls, C₇ to C₂₀ alkylaryls, C₁ to C₁₂ alkoxy, C₁ to C₁₂ fluoroalkyls, C₆ to C₁₂ fluoroaryl, and C₁ to C₁₂ heteroatom-containing hydrocarbons and substituted derivatives thereof.

51. (Currently Amended) A supported, treated catalyst system produced by a process comprising the steps of:

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

(a) forming a supported bimetallic catalyst system comprising a first catalyst compound and a second catalyst compound, wherein the second catalyst compound comprises a metallocene catalyst compound, and wherein the first and second catalyst compounds are supported on a common support; wherein the common support is an inorganic oxide; and

(b) contacting the supported bimetallic catalyst system of (a) with at least one additional catalyst compound that can be activated by methylalumoxane, wherein the metallocene catalyst compound is selected from the group consisting of: bis(n-butylcyclopentadienyl)zirconium dichloride; bis(n-butylcyclopentadienyl)zirconium difluoride; (tetramethylcyclopentadienyl) (n-propylcyclopentadienyl)zirconium dichloride; (pentamethylcyclopentadienyl) (n-propylcyclopentadienyl)zirconium dichloride; bis(1,3-methylbutylcyclopentadienyl)zirconium dichloride; and bis(n-propylcyclopentadienyl)hafnium difluoride.

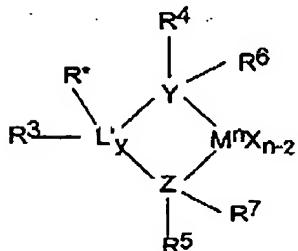

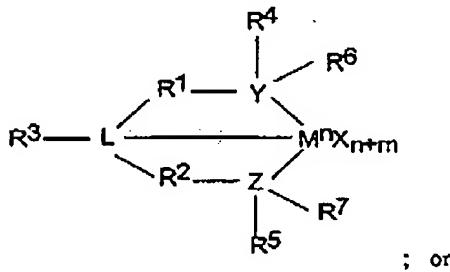

52. (Original) The supported, treated catalyst system of claim 38 wherein the supported, treated catalyst system and the supported bimetallic catalyst system each have a transition metal concentration, and wherein the supported, treated catalyst system has a higher transition metal concentration than does the supported bimetallic catalyst system.
53. (Previously Presented) The supported, treated catalyst system of claim 38 wherein the first catalyst compound is a Ziegler-Natta catalyst.
54. (Original) The supported, treated catalyst system of claim 53 wherein the Ziegler-Natta catalyst comprises a compound selected from the group consisting of Group 4 and Group 5 halides, oxides, oxyhalides, alkoxides, and mixtures thereof.

Application No. 10/748,014
 Amendment dated February 27, 2008
 Reply to Office Action of January 11, 2008

55. (Original) The supported, treated catalyst system of claim 54 wherin the Ziegler-Natta catalyst is titanium tetrachloride.

56. (Currently Amended) The supported, treated catalyst system of claim 38 wherein the at least one additional catalyst compound that can be activated by methylalumoxane is selected from the group consisting of: a metallocene catalyst compound; a Group-15-component-containing compound; a phenoxide catalyst compound; or a conventional transition metal catalyst compound.

57. (Original) The supported, treated catalyst system of claim 56 wherein the Group-15-component-containing compound is represented by a formula selected from the group consisting of:

wherein M is selected from the group consisting of: Group 3 to 12 transition metals and Group 13 to 14 main group metals;
 each X is a leaving group;

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

y is 0 or 1;

n is the oxidation state of M and is selected from the group consisting of: +3, +4, and +5;

m is the formal charge of the YZL or the YZL' ligand and is selected from the group consisting of 0, -1, -2 and -3;

L is a Group 15 or 16 element;

L' is selected from the group consisting of: a Group 15 element, a Group 16 element, and a Group 14-containing group;

Y is a Group 15 element;

Z is a Group 15 element;

R¹ and R² are each selected from the group consisting of: a C₁ to C₂₀ hydrocarbon group, a heteroatom containing group having up to twenty carbon atoms, silicon, germanium, tin, lead, halogen and phosphorus;

R³ is absent or is selected from the group consisting of: a hydrocarbon group, hydrogen, a halogen, and a heteroatom containing group;

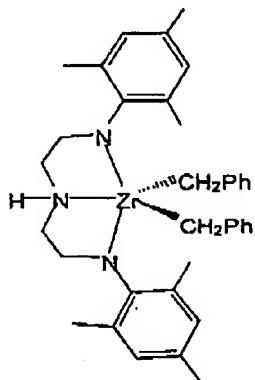

R⁴ and R⁵ are each selected from the group consisting of: an alkyl group, an aryl group, a substituted aryl group, a cyclic alkyl group, a substituted cyclic alkyl group, a cyclic aralkyl group, a substituted cyclic aralkyl group or multiple ring system having up to 20 carbon atoms, a C₁ to C₂₀ hydrocarbon group, a C₁ to C₂₀ aryl group, a C₁ to C₂₀ aralkyl group, and a heteroatom containing group.

R⁶ and R⁷ are each absent, or are selected from the group consisting of: hydrogen, an alkyl group, a halogen, a heteroatom or a hydrocarbyl group; and

R* is absent or is selected from the group consisting of: hydrogen, a Group 14 atom containing group, a halogen, and a heteroatom containing group.

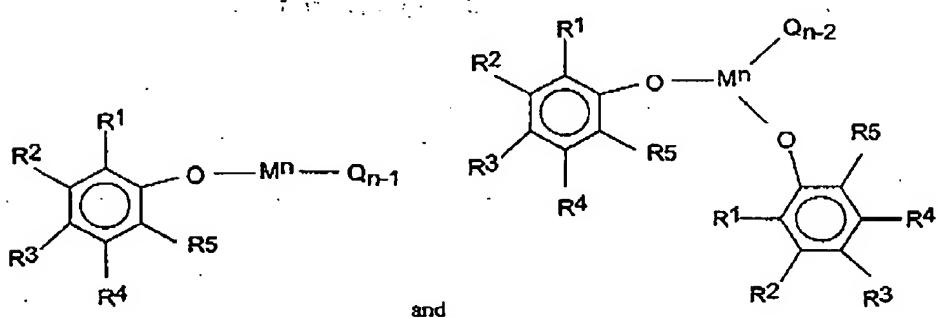

Application No. 10/748,014
 Amendment dated February 27, 2008
 Reply to Office Action of January 11, 2008

58. (Original) The supported, treated catalyst system of claim 57 wherein the Group-15-component-containing compound is

wherein Ph represents a phenyl group.

59. (Original) The supported, treated catalyst system of claim 56 wherein the phenoxide catalyst compound is represented by a formula selected from the group consisting of:

wherein R¹ is selected from the group consisting of: hydrogen and a C₁ to C₁₀₀ group;
 at least one of R² to R⁵ is a heteroatom-containing group;
 each of R² to R⁵ that is not a heteroatom-containing group is selected from the group
 consisting of: hydrogen and a C₁ to C₁₀₀ group;

O is oxygen;

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

M is selected from the group consisting of: Group 3 to Group 10 transition metals and lanthanide metals;

n is the valence state of the metal M and is selected from the group consisting of 2, 3, 4, and 5; and

Q is an alkyl, halogen, benzyl, amide, carboxylate, carbamate, thiolate, hydride or alkoxide group.

60. (Currently Amended) The supported, treated catalyst system of claim 38 whercin the at least one ~~additional catalyst~~ compound that can be activated by methylalumoxane is selected from the group consisting of: complexes of nickel; complexes of nickel and palladium; Group 8 to 10 metal catalyst compounds containing diimine-based ligands; Group 5 and 6 metal imido complexes; bridged bi-aromatic ligand compounds; and compounds represented by the formula

where M is a metal selected from Group 3 to 13 or lanthanide and actinide series of the Periodic Table of Elements;

Q is bonded to M and each Q is a monovalent, bivalent, or trivalent anion;

X and Y are bonded to M;

one or more of X and Y are heteroatoms;

Y is contained in a heterocyclic ring J, where J comprises from 2 to 50 non-hydrogen atoms;

Z is bonded to X, where Z comprises 1 to 50 non-hydrogen atoms;

t is 0 or 1;

A is a bridging group joined to at least one of X, Y or J;

q is 1 or 2;

Application No. 10/748,014
Amendment dated February 27, 2008
Reply to Office Action of January 11, 2008

n is an integer from 1 to 4.

61. (Original) The supported, treated catalyst system of claim 56 wherein the conventional transition metal catalyst is selected from the group consisting of: a Ziegler-Natta catalyst; a vanadium catalyst; and a Phillips-type catalyst.
62. (Original) The supported, treated catalyst system of claim 38 wherein an antistatic agent is present in an amount less than 2% by weight of the supported, treated catalyst system.
63. (Original) The supported, treated catalyst system of claim 38 wherein the antistatic agent is present in an amount in the range of from 0% to 1% by weight of the supported, treated catalyst system.
64. (Currently Amended) The supported, treated catalyst system of claim 38 wherein, prior to contacting with the supported catalyst, the at least one ~~additional catalyst~~ compound that can be activated by methylalumoxane is activated.
65. (Previously Presented) The supported, treated catalyst system of claim 38 wherein the molar ratio of methylalumoxane to metallocene used is less than or equal to 150.
66. (Previously Presented) The supported, treated catalyst system of claim 38 wherein each different catalyst compound that comprises the bimetallic catalyst is supported on a single type of support such that, each particle of support material includes both the first and second catalyst component.

Claims 67-68 (Cancelled)
